MANN-FILTER gearbox oil filter element HU 721 x KIT and HU 721 z KIT

When changing the filter element, different seals and fixing screws are required to fasten the cap, depending on the design of the gearbox. For this reason MANN-FILTER replaced the gearbox filter element HU 721 by HU 721 x KIT and HU 721 z KIT.

The MANN-FILTER range therefore offers these different products with suitable accessories. The service-friendly design ensures that no oil leak can occur at the gearbox and the transmission is effectively protected against wear.

To prevent possible leaks, please always use the correct MANN-FILTER product.

HU 721 x KIT

MANN-FILTER gearbox oil filter HU 721 x KIT (part number: 1019268S01) is used for Series VT/VTO **manual transmissions**. Many vehicles have this type of transmission.

HU 721 z KIT

For **automatic** Geartronic and I-Shift or Optidrive 2 transmissions, MANN-FILTER gearbox oil filter HU 721 z KIT (part number: 1022096S01) is fitted.

The HU 721 filter element itself is identical for both versions.
