PU 12 003/1 z: Guidance for (de-)mounting

Disassembly of filter

1. Unplug the water sensor
2. Turn the drain screw upwards and drain the filter
3. Open the housing: MANN-FILTER recommends the use of a specialized tool combined with additional support from a ratchet and extension
4. Take out the element: The bayonet lock (type A and C) can be unlocked with manual force (pivot-point: see red arrow on page 2). The snap-fit (type B) can be unlocked with support of a screwdriver

Assembly of the filter

1. Change O-ring of the housing
2. Element assembly: First align arrows of the element and housing
 - a. Type A: Turn complete element until bayonet is locked
 - b. Type B: Push element firmly downwards until snap-fit is locked
 - c. Type C: Put element in the housing and then turn the white ring until bayonet is locked
3. Lube all O-rings of the element and housing
4. Assemble housing cup incl. element with the housing cover. Important: Align arrow of housing cup flush with arrow of housing cover (next to open lock symbol)
5. Turn housing cup until housing parts lock. Arrow of housing cup is now flush with closed lock symbol.
6. Plug-in water sensor and close drain screw by turning it downwards

Complete assembly video is available in our online catalogue: [PU 12 003/1 z](#)
